[MANFREDI (Hieronymo).] Liber de Homine, cujus sunt libri duo, primus liber de conservatione sanitatis et de causis et naturis omnium eorum quæ sumuntur in cibo [*Italice* 'Libro del Perchè'].
folio. Bononiæ impressum per me Ugonem Rugerium et Doninum Bertochum Regienses, MCCCCLXXIIII.

First and uncastrated edition. Without pagination or catchword. The leaf of dedication and the first page of text are illuminated in gold and colours, with the name and arms of the original possessor of the volume, Carolus Castelli, in the border.

[Manfredi (Hieronymo)]—*continued.*

This singular early work on the preservation of health is called 'Il Perchè' because each paragraph or question begins with that word. Many of the questions and answers were suppressed in later editions. The volume contains a curious early poem, in terza rima, on Diet and Regimen.

At this time (1878) it is the earliest printed work, with a date, in the Society's Library.

THAYRE (Thomas). An excellent and best approoved treatise of the Plague, with true and perfect cure of the Plague, with secret and unknowne preservatives against all infection, &c. 4to. Lond. 1625

This work appears, from internal evidence, to be an enlarged edition of Thomas Phayer or Phayre's "Treatyse of the Pestilence," in his "Regiment of Life," with additions from later writers. The name of Thayre is either an error or an intentional variation of the name by the publisher.
